

### Simple Solution

- Availability (24/7)
- Accessibility (via Internet)
- No software to maintain
- Regular upgrades
- Simple subscription fee
- Patent pending technology

### Regs and Legs

- Local regulations
- National regulations
- Pending legislation
- Compliance schedules
- Emissions tables
- Contact information for regulatory agencies
- Reporting and auditing requirements
- Health and safety standards
- Permitting requirements
- Government forms

### Key Features

- Multi-Language search
- Key terminology search
- World-wide content team
- Culturally accurate translations

### Countries Available

125 countries are targeted for inclusion in the database. Regulations from every continent in the world will be included (except Antarctica). This includes:

- Africa
- Asia
- Europe
- European Union
- Middle East
- Latin America
- Russia and NIS

*Companies with international operations face expensive, non-optional requirements to comply with international, national, regional and local EH&S regulations. Complying with these regulations costs internal resources, considerable legal fees, research fees, translation time and money, travel expenses and other resource-consuming efforts. WorldRegs™ delivers a single repository of worldwide governmental regulations that allows a user to access them and provides culturally accurate translations of the regulation. The WorldRegs™ solution has been 10 years in the making and is now finally available.*

### Business Problem

Multinational companies with existing operations or planned expansions in foreign countries face a difficult and expensive task of finding, evaluating and complying with EH&S regulations. Typically, just identifying and finding the regulation can cost valuable time and cause project delays, but then translating and understanding the cultural intent of the regulation requires local EH&S expertise that is very costly. Because regulations constantly change, this process is repeated again and again despite the Internet. Only 75% of regulations are on-line, with the remaining 25% in place and enforced. Our global network assures we are as current as possible in obtaining all relevant regulations.

Tracking changes to existing regulations or watching pending legislation can add significant costs to an operation. Tracking the hundreds or even thousands of local, regional, national and international regulations is a formidable challenge that few organizations have adequate resources to meet.

### WorldRegs™ Solution

WorldRegs™ has created a global database containing thousands of local, regional, national and international EH&S regulations. Supporting this database is a worldwide network of EH&S specialists dedicated to WorldRegs who accumulate, evaluate and translate the regulations for their country. This network also monitors pending legislation and changing regulations as well as government action regarding EH&S compliance.

The WorldRegs™ worldwide network of EH&S specialists not only understand the local culture and government; they have all worked for multinational corporations. They are adept at finding and interpreting a particular country's governmental regulations.

Those compiled regulations and pending legislation are then made available through the WorldRegs™ proprietary delivery system. This can be accessed through the Internet with a simple subscription fee. Searches can be made by country, key regulatory terms and in multiple languages. Every regulation is provided in the native language with a summary translation in English.

**Having accurate, searchable and convenient access to international EH&S regulations and pending legislation will reduce or eliminate:**

- International legal fees
- Local EH&S expertise expenses
- EH&S research time and money
- Translation expenses
- Delays in operational readiness
- Travel time and money
